

**PREPARE TO EARN
YOUR LEED GREEN
ASSOCIATE WITH OUR**

EXAM PREP COURSE

Our Exam Prep Course prepares you to earn your LEED Green Associate v4 credential so that you can promote sustainable and environmentally responsible practices through your work.

WHY TAKE THE LEED GREEN ASSOCIATE EXAM PREP COURSE?

A LEED Green Associate credential demonstrates a person's knowledge of green building practices and principles. It can not only help you stand out from others, but also be a stepping stone to advancing your career in green building. The course introduces key concepts, terms, and processes to empower learners with the confidence and knowledge they need to earn their LEED Green Associate v4 accreditation.

WHAT WILL I LEARN?

Completing our online exam prep course prepares you to:

- Understand the structure and requirements of the LEED Green Associate Exam
- Describe the concept of regenerative building
- Explain and apply the key concepts found in the LEED rating systems
- Identify various modes of alternative transportation
- Differentiate green building practices and their associated environmental, economic, and social benefits
- Explain the negative effects of light pollution on the environment and the importance of minimizing construction's impact on the surrounding environment
- Outline the importance of using environmentally preferable materials in green design
- Begin your preparation to earn your LEED Green Associate accreditation with confidence
- Summarize the strategies for improving the health and comfort of building occupants

CAREER PATHS

The U.S. Bureau of Labor Statistics (BLS) expects that overall employment of those who work in green construction is projected to grow 5% from 2022 to 2032, faster than the average for all occupations. Core green jobs, which are occupations that play a direct role in conserving the environment, are expected to grow by 20% over the next five years.

Common green building career paths or growth opportunities include:

Architect

Architects plan and design buildings, including green buildings, and ensure that these structures are functional, safe, and in line with the needs and expectations of the people who use them. They must understand all aspects of a building, such as mechanical, plumbing, electrical, landscaping, security, and technology. When developing designs, architects must follow various ordinances, such as zoning laws, fire regulations, and state and local building codes.

Construction Manager

Construction managers, also known as general contractors, plan, coordinate, and supervise construction projects, from overseeing daily operations to maintaining communications between all stakeholders. They also help reduce the impact that site development has on the environment, such as by purchasing construction materials from companies that adhere to environmentally friendly practices.

Chief Sustainability Officer

Chief sustainability officers help organizations develop sustainability goals and oversee that these plans, policies, and practices are executed and achieved. They consider the impacts of an organization's products or practices on the environment and coordinate across departments to communicate and advance sustainability goals. The role of a chief sustainability officer can differ; while some focus on reporting and complying with regulations, others primarily identify and help resolve inefficiencies within their organizations.

The LEED Green Associate Exam Prep Course is available 100% online.
